

## Snowdogg® One Way Municipal Plow Assembly

- Aggressive roll formed design reduces drift and throws snow farther than a straight blade
- Full-length push frame spans entire mold-board and distributes loading for exceptional strength and long life
- Available in fixed or reversible options
- Heavy construction that can withstand rugged use and impact
- Reversible push frame adds flexibility when clearing intersections and cul-de-sacs
- Full trip compression springs for smoother plowing over hidden obstacles
- Available in 10- and 11-foot widths
- Adjustable attack angles from 0° to 20°
- 2 chain level lift to maintain an even scrape and even cutting edge wear
- Made in the USA
- Buyers Products SnowDogg® One Way Municipal Plow Assembly reduces drift and throws snow farther than a straight blade thanks to its aggressive roll formed design. The plow features a full-length push frame that spans the entire moldboard and distributes loading for exceptional strength and long life. Four different attack angle positions (0°, 5°, 10°, and 20°) give you even more control over how your plow bites the road.
- Available in 10- and 11-foot widths, the One Way Plow comes in fixed or reversible options. Get fewer moving parts for reliable service and long life with the fixed option, and added flexibility on intersections and cul-de-sacs with the reversible option. Full trip compression springs allow for smoother plowing over hidden obstacles.
